

Performance Assessment

ACTIVITY NAME	DATE
Compliance Conversation with Dan	7/13/2026

Overall Performance

Overall Score: 62
Competency Level: Developing

Summary: The conversation stayed calm and gradually became more collaborative, with the learner acknowledging the issues and moving toward problem-solving. Dan's concerns about the delayed Henderson reports and the error-rate gap were recognized more directly as the exchange progressed. The main growth area is stronger active listening and clearer closure, since the discussion remained fairly broad and did not land on a concrete next step.

Key Recommendations:

- Start with a brief, direct framing of the performance issue and its business impact before inviting discussion.
- Use reflective listening to summarise Dan's concerns and confirm understanding before moving to solutions.
- End every compliance conversation with a specific next step, owner, and timing for follow-up.

Skill Overview

Skill Category	Score	Feedback
Emotional regulation under pressure	72/100	The tone remained steady and non-escalatory throughout, even when Dan expressed surprise and asked for clarification. The learner stayed calm and kept the conversation moving toward resolution.
Intent clarity and framing	58/100	The issue was eventually named in practical terms, but the framing remained somewhat general and reactive. There was limited use of explicit impact statements or clear 'I' framing to separate behavior from judgment.
Active listening and perspective-seeking	52/100	There was some acknowledgement of Dan's questions and a willingness to discuss prevention, but few truly reflective responses were visible. The exchange did not show much probing into Dan's perspective or summarising back what he had said.
Resolution focus and closure	66/100	The conversation did move toward solving the problem, with agreement that the issue should be resolved and prioritised. However, it stopped short of a concrete action plan, so the closure remained incomplete and a bit open-ended.

Turn-by-Turn Analysis

Conversation	Feedback
Turn 1 AI: Yasmeen, I'm a bit surprised by this meeting. Can you clarify what specific issues we're addressing here? You: okay	Went Well: Emotional regulation under pressure – "okay" — The response is brief and non-escalatory, so it does not add conflict to Dan's guarded opening. Could Be Better: This answer is too minimal to establish your intent or reassure Dan. You did not name the purpose of the meeting or acknowledge his concern, so he is left without any direction. Tip: Open with one clear sentence that names the reason for the meeting and acknowledges his question.
Turn 2 AI: Sure, Yasmeen. I know the reports were delayed, but there were some unexpected challenges. Can we discuss how to prevent this in the future? You: could you please let me know the exact issue so that i can help you with	Went Well: Intent clarity and framing – "let me know the exact issue" — You clearly frame the purpose as understanding the problem so you can help., Active listening and perspective-seeking – "so that i can help you" — This signals openness and invites Dan to explain rather than defending your own position. Could Be Better: The tone is calm and supportive, but the wording is still a bit generic and doesn't reflect back the specific issue Dan just raised. A more grounded response would acknowledge the delayed reports and ask a targeted follow-up question. Tip: Mirror the specific issue first, then ask one focused question about what's causing it.
Turn 3 AI: I understand. The main issue is the delayed reports for the Henderson account and the error rate not improving. Can we discuss how to address these challenges? You: yes, we can and we should resolve it asap	Went Well: Resolution focus and closure – "resolve it asap" — You move the discussion toward action and urgency rather than leaving it open-ended., Intent clarity and framing – "we should resolve it asap" — The message clearly signals a problem-solving intent. Could Be Better: You agree to resolve the issue, but you still don't define what resolution will look like or what information you need from Dan. The response also skips any reflection on his perspective, so it reads more as agreement than active facilitation. Tip: Name the next concrete step, such as identifying root causes or agreeing on a short action plan.
Turn 4 AI: Absolutely, Yasmeen. I'm open to suggestions on how we can tackle the report delays and error rates. What do you think should be our first step? You: first we need to prioritise	Went Well: Resolution focus and closure – "first we need to prioritise" — You start shifting the conversation into action and sequence, which is useful for moving toward a plan. Could Be Better: The response is directionally helpful but too vague to create real momentum. You say to prioritise, but you do not specify

Conversation	Feedback
	priorities, invite Dan's input, or convert the idea into a concrete next step. Tip: Follow your prioritisation statement with one or two specific items to tackle first and ask Dan to confirm or add to them.
