

Assessment Complete

All 4 episodes · Overall zone health: 93/100

OVERALL LEADERSHIP SCORE

76%

Based on all 16 decisions across your four episodes.

NEXT STEP

Your responses will be discussed with a facilitator in the SAARTHI workshop debrief. The zone health reflects the cumulative direction of your leadership choices — a signal to explore, not a score to optimise.

COMPETENCY BREAKDOWN

Self

MINDSET · IDENTITY · SELF-MASTERY

80%

Delegation and working through others

80%

You stayed focused on direction-setting and trusted your SLMs to manage execution. You delegated both the task and the thinking — your SLMs are making good calls without needing to escalate.

People development100%

Development runs through your conversations all year — not just in quieter quarters. You find coaching moments inside ordinary business situations, and your SLMs are building judgment, not just receiving answers.

Infusing purpose100%

You proactively explain the reasoning behind decisions before your SLMs have to ask. When the full picture can't be shared, you're honest about that rather than vague. Your SLMs feel informed and trusted — even when they disagree.

Building buy-in80%

You actively distinguish between an SLM who genuinely owns the work and one who is just complying. You check for real commitment before execution begins — and you address quiet resistance early, before it slows things down at the field level.

Adaptive leadership80%

No two SLMs are led exactly the same way. You spot when someone is struggling or disengaged before it shows in results — and you adjust. Your approach has evolved alongside your team, not stayed fixed.

Building trust20%

Trust is strong with long-tenured SLMs, but newer members feel distant. Silence is being treated as comfort. Your SLMs don't raise concerns early because they don't expect a constructive response.

Planning beyond the monthly cycle

100%

You hold a longer-term view alongside the monthly cycle. When priorities shift, you communicate clearly what is being parked and why — your teams understand the plan for the quarter, not just the month.

Checking for understanding

50%

You check in on understanding when something seems off — but not consistently before execution starts. You're starting to ask questions that test comprehension rather than just confirming that the message was received.
